

Kangaroo Surgical Case Cart

www.kangaroocasecart.com

- ⇒ **save space used by 'conventional' Case Carts > 80%**
- ⇒ **move large quantities in a single motion**
- ⇒ **reduce costly 'handling' of supplies**
- = **improve Case Cart turnaround time**

Kangaroo Case Carts carry K-Push-in Shelves loaded by K-Transfer Carts facilitating the easy and rapid distribution of supplies. Air tight doors provide safe transportation of sterile or contaminated materials within or between facilities.

While conventional 'Case Carts' are sitting dormant... Kangaroo Case Carts are busy delivering shelving and returning medical devices for reprocessing. Kangaroo Case Cart components can be customized to comply with your sterilizer chamber, automated loading conveyor, and shelving sizes. The size and components of the K-Push-in Shelves are easily modified in 12 inch spaces side-to-side and 2 inch spaces up-and-down, using solid shelves, basket shelves, or L-slides and container drawer-glides. **The ergonomically compliant Kangaroo Surgical Closed Case Cart components facilitate moving large quantities, easily and rapidly... in a single motion.**

K-Push-in Shelves® are transferred with the time and effort needed to move a single supply item.

K-Transfer Carts® 'lock' and 'release' with a single motion, for easy, safe and rapid transfer.

K-Docking Stations® act as a base for the K-Push-in Shelving at the point-of-use.

The **Kangaroo Supply Case Cart System** is a cost effective investment and a valuable tool for significantly decreasing the footprint consumed by 'conventional' Case Carts and increasing the cost effectiveness of Materials Management.

You will deploy a **significantly lower** number of Surgical Case Carts when you use the **ergonomically compliant** Kangaroo Closed Case Cart System.

- ⇒ **maintain and distribute high density Case Cart shelving**
- ⇒ **save space used by 'conventional' Surgical Case Carts > 80%**
- = **minimize the costly repetitive handling of supply items**
